

C1530R2

1.5 RM

PRODUCT INFORMATION

Proven solid performance. C1530R2 is healthy with good lodging resistance. Plants have a moderate stature and profile. Can be positioned in fuller season markets.

- Solid proven performance, healthy with moderate height and good lodging resistance.
- Resistance to the Soybean Cyst Nematode, PRR and BSR.
- Highly rated against major soybean diseases including: IDC, SDS and White Mold.
- Very widely adapted and can be positioned in fuller season markets.

MANAGEMENT TIPS

Very good adaptability into no-till and minimum tillage environments and to all common row spacings. C1530R2 can be positioned on most soybean acres across South Dakota, Minnesota, Wisconsin, Michigan, and into northern Iowa and Nebraska, where maturity i

GDUs are estimates based on observations and are to provide guidelines for area adaptation. Performance may vary from location to location and from year to year, as local growing, soil and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible and should consider the impacts of these conditions on the grower's fields. Preferred Placement Zones represent the best areas of adaptation for a product based on in-field observations, genetic background, and trial data. Products may fit within only a portion of a zone, and products may perform well in other areas not identified. Contact your sales team for details.
