

PRODUCT INFORMATION

C2020R2 is a high yielding, consistent performer from east to west with a high win ratio in plots. Eye catching appearance; healthy with good lodging scores and a solid disease package.

- A primary choice for producers with multiple years of tremendous yield potential across wide geographies.
- Superior emergence and early vigor with eye catching appearance with good height and canopy width.
- Good lodging scores and a solid disease package.
- Widely adapted across the upper Midwest and has great southern movement.

MANAGEMENT TIPS

Excellent adaptability into no-till and minimum tillage and well adapted to all row spacings. Widely adapted across the upper Midwest and has great southern movement. Consistent performance across all geographies, east-to-west.

PLANT CHARACTERISTICS

	1	2	3	4	5	6	7	8	9

GDUs are estimates based on observations and are to provide guidelines for area adaptation. Performance may vary from location to location and from year to year, as local growing, soil and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible and should consider the impacts of these conditions on the grower's fields. Preferred Placement Zones represent the best areas of adaptation for a product based on in-field observations, genetic background, and trial data. Products may fit within only a portion of a zone, and products may perform well in other areas not identified. Contact your sales team for details.
